

# Risk Management is a Key to Stability

## Benefits of an Effective Risk Management Program are Realized in Several Surprise Areas

There is no such thing as a sure thing. The past few years have taught us that the global economy, energy prices, consumer buying trends and supply chain issues are even more unpredictable than a New England winter. To survive these radical fluctuations in any industry is quite a challenge. To thrive in these conditions requires more than luck and good guessing. It requires a **well developed plan** to identify, react and implement a resiliency plan that takes these and any risks into consideration.

There are only **three ways to respond to risks** that may affect your operation: You can attempt to **reduce the probability** of the event happening to you; you can **reduce the effect** it has on you when the event occurs; and you can **transfer the risk** to someone else, usually in the form of insurance or by creating a hedge against it. All are perfectly valid and appropriate in certain circumstances. You need to determine what those circumstances are, and plan how the response is going to actually take shape.

Nobody wants to create a crisis just to see how they would handle the response, but with sound planning and a host of learned experiences, you can form a better response tomorrow than you can today, and ultimately demonstrate a plan for stability that puts you **ahead of your peers** and actually uses the uncertainty of the future as your ally.

## You Can Never Do Too Much Planning

Success is directly related to your efforts at effective planning. **Secure IT Experts are world-class experts in the areas of identifying disruptive events, assuring dependable information security and controls, risk management, mitigation and response and incident and crisis response management.** We can help you **craft agreements** with your business associates that appropriately **identify risk and responsibility** for your operation, **create risk mitigation procedures** to protect your ongoing operation, and **assure security awareness**, training and incident response support to guide an effective response by all parties involved. **Secure IT Experts** can also help you develop plans to create and exercise Business Continuity and Disaster Recovery plans that are actionable and cost effective.

**Prioritize and Address the Items that Derive Most Value**

**Effective Approaches involve the entire organization**

**Good Risk Management is a Process not a Project**

**The Value of Conducting a Low-Cost Exercise**

**“Many organizations attempt to reduce risk only by implementing physical defenses like weather barriers or fire suppression. True risk management is all this, but is also creating an environment that takes control of the situation and uses good planning to create increased value and real benefit.”**

# S I T E Risk Management Services

## Secure IT Experts Can Help Prevent Crises

Disruptions to your operation occur almost every day. Weather conditions, utility interruptions, computer technology “glitches”, illnesses, supply chain issues, transportation problems are among the most common. Add to that the crisis conditions caused by terrorism threats, workplace violence, personal reputation issues and all sorts of other news items, and you’re asked to navigate some pretty dangerous waters. We have developed a plan that is **not controlled by the event** itself, but by its **effect on your organization**. We address a Risk Management plan that looks to create a response to any event that might disrupt you physical **Plant** and equipment, key **Processes**, essential **People**, and complex **Technology**. Three “P’s” and a “T”. These are the four chief elements of your stable and successful operation.

Risk management needs to address exactly what to do **when** your operation is disrupted, not just to play the game of probability **if** something happens.

## Secure IT Experts and Risk Management

Secure IT Experts begins with a comprehensive evaluation of the potential **Threats** to your operation, the areas in which you have potential **Vulnerabilities** and how you can best create a **Response** that keeps you operating and solidifies your reputation as an organization that can deliver effective results despite whatever circumstances occur globally, regionally, in your industry or to you personally. Success and stability is all about **making good choices** and our Experts have built their careers on making and advising on these good choices. Our action plans are understandable and testable and become part of your program of continual improvement that is so important in creating a vibrant and reliable workplace for your employees and a dependable relationship with your business partner associates. We know how to create opportunity from crisis and stability from chaos.
